

Protect your execs

Step up mobile security with Jigsaw24 and Code42

Do you know where your data is? Experts at Gartner, Forrester and IDC estimate that only 20% of corporate data resides in corporate databases – the rest sits on personal devices like laptops and tablets, meaning it's not covered by your existing backup systems.

You could always ban personal devices, but good luck telling the CEO he can't use his iPad at work any more. Instead, we recommend CrashPlan Proe, a simple, lightweight solution for backing up and securing company data. And even better, it costs as little as £2 per device per month.

Why choose CrashPlan Proe?

- It's incredible **value for money** – see opposite.
- It discreetly **backs up corporate data** from desktops to CrashPlan's unlimited public cloud, with no disruption to the end user.
- It enables **secure mobile access** to backed up files from iOS, Android and Windows phone devices.
- **It's secure**, so there's no chance of your files getting plucked out of the air between the device and datacentre.
- You can even **combine it with SharePlan** to sync files and folders between your server room and mobile devices, so employees can work seamlessly wherever they are.
- It **respects existing Active Directory permissions**, so can be fully integrated with existing systems.
- It's **centralised and scalable**, so one admin can manage thousands of end users.

What you get

- Continuous, unlimited enterprise endpoint backup to the cloud.
- CrashPlan's unlimited public cloud setup.¹
- Universal support for Windows, OS X and mobile operating systems.
- Anywhere, any time secure data access for mobile workers.

The money bit

Say you have £1000...

That's 10 CrashPlan Proe licences, each of which cover 1 user with up to 4 devices.

So that's £100 per user per year.
Or £25 per device per year.
Or just £2 per device per month.

¹ Additional setup fees may apply.
